## State Leadership

Susana Martinez, Governor
John Sanchez, Lieutenant Governor

## State Personnel Board Members

Christine Romero, Chair
Jerry Manzagol, Vice Chair
Megan Muirhead, Member
Carmen V. Trujillo, Member

## State Personnel Office

Justin Najaka, State Personnel Director
Nivia Thames, Deputy Director
Leane Madrid, Quality Assurance and Data Analytics Division Director
Cliff McNary, Classification and Testing Manager
Amparo Juarez, Compensation and Classification Analyst
Alicia Lucero, Senior HR Policy Analyst

## Purpose of Report

The State Personnel Board (SPB) Rules ${ }^{1}$ require the SPB to annually adopt and submit a compensation report to the Governor and the Legislative Finance Committee (LFC) that details the results of the State of New Mexico's (State) annual compensation survey, and provides a review of the State's total compensation structure. This document shall serve as the official report.

This report conveys economic pay trends, findings, and data derived from the compensation and benefits surveys analyzed by the State Personnel Office (SPO). This data is analyzed in order to illustrate the salary ranges, rates, average salaries, and benefits for state classifications in the eight state Comparator labor market. The report also summarizes key findings and Comparative data showing the relationship of the State's wages and compensation programs to those of the eight state Comparator labor markets. Additionally, it presents data on State employee demographics, the use of available pay mechanisms, and industry accepted workforce metrics for the enhancement of the classified service pay system.

## Personnel Act \& Compensation Philosophy

## Personnel Act

The State Personnel Act requires New Mexico to establish and maintain a system of personnel administration for classified employees based solely on employee qualifications and abilities that provides greater economy and efficiency in the management of State affairs. ${ }^{2}$

## Compensation Philosophy

In 2001, the SPB established a policy regarding the state's approach to compensation:
"The Compensation System (salary and benefits) for classified state government employees will be structured to support the mission of State Government and be consistent with state statutes to provide a high level of responsive service in meeting the needs of its citizens. The foundation of this structure is to reward employees for their specific contributions to the achievement of organizational goals and objectives. Fiscal responsibility requires that this approach be administered in a consistent manner throughout the state's classified service based on its financial capabilities."

[^0]
## Executive Summary

The classified service workforce consists of over 17,000 employees within 64 executive agencies. The State recognizes that its employees are its most valuable asset, and that these employees are critical to providing services to all New Mexicans. Employment with New Mexico state government represents a career in public service, and an opportunity to deliver excellence, accountability, and efficiency.

Both private and public employers seek to attract and retain qualified and dedicated employees to translate business strategy into success. Accordingly, it is critical to have a sound compensation program that is externally competitive. As the economy continues to recover, the State is experiencing pressure as other private and public sector organizations are competing for the same workers that the State is trying to attract and retain. Thus, SPO has worked hard to develop 11 new pay lines which will address market pricing issues, of which 2 pay lines have been approved by the SPB, creating a cleaner classification system to help recruit new employees. Work continues to get all new pay lines approved by the SPB.

## Classified Employee Pay and Salary Structure versus Market

The State strives to pay a competitive public sector salary, while remaining fiscally responsible. This approach has allowed the State to compete with both private and public employers in the region. Currently, the State's annual classified employee average base salary is $\$ 45,906$. New Mexico ranks sixth in both the primary eight state Comparator market for public sector employee and total compensation (salary plus benefits). Both of these rankings indicate that New Mexico is slightly behind its goal of being the average payer within the region. Regardless, a detailed analysis and Comparison of specific classification levels shows New Mexico to be at market for most general classifications, but further behind actual market averages in many hard to recruit and retain classifications for critical occupations such as Corrections, Information Technology, and Healthcare. In some cases, the average salary levels for selected benchmark classifications in these occupations, impact the State's ability to attract, retain, engage, motivate, and reward qualified employees.

In 2001, the State's pay band width was expanded to $78 \%$ wide, to allow employees the ability to laterally move (be promoted) in pay, as skills increased, rather than having to be promoted on a vertically designed pay structure. In FY14, SPO narrowed the pay band width to $74 \%$, in an effort to bring the State classified service band width closer to the industry standard of $50 \%$. The Governor, working with the Legislature, addressed this matter by having vacancies budgeted at midpoint rather than entry. The pay band width has already had a positive impact on filling vacant positions. In a continuing effort to align the State's compensation practices with industry standards, six new pay lines have narrower pay band widths of $67 \%$ (IT), $60 \%$ (Engineering, Architecture, Attorneys, Social Services), and 40\% (Corrections).

The State must be prepared to address pay concerns; however, revenue shortfalls in the past few years have restricted the State from:

- Establishing and maintaining competitive position in the marketplace;
- Attracting and retaining high quality employees; and,
- Addressing the need for a salary structure adjustment, that may occur when funding becomes available.

SPO has worked with the Hay Group and Kenning Consulting to review and develop a methodology to address these issues.

## Overuse of Alternative Pay Bands

Currently, over 25\% of the State's job classifications are assigned to Alternative Pay Bands (APB). APBs are being utilized in response to the State's inability to adjust and maintain a competitive salary structure. The increased number of APBs is an indicator that the state's classified service salary structure has not been maintained and requires further attention.

APBs were originally designed to only be used on an exception basis, to address compensation issues related to recruitment and retention that could not normally be handled within the general base salary structure. A job that is evaluated and assigned to range levels appropriately captures and maintains internal equity to other similar sized jobs within the classified service. When external forces of demand exceed the supply of the labor market, pressure is placed on the State's compensation structure. This market pressure has impacted the State's ability to attract and retain well-qualified applicants, resulting in the SPB "temporarily" assigning job classifications to higher pay bands. These APBs are reviewed annually, and the Compensation and Classification Division presents recommendations to the State Personnel Board on renewing or discontinuing the temporary pay band assignment. Some classifications have never had an APB removed once it has been approved; market conditions and talent availability require the annual renewal of certain APBs.

Absent ongoing maintenance and adjustments to the State's compensation structure, New Mexico will continue to experience challenges each year in its ability to competitively recruit and retain employees, especially in critical occupations. Changes to the State's compensation structure in FY17 will provide needed relief to these market pressures.

## Total Compensation Components Unbalanced

Total compensation for employees consists not only of the cost of the direct salary received, but also includes the value and cost to the State for benefits provided to employees. For the State's classified service, the percentage of total compensation provided in direct salary versus indirect benefits is skewed towards providing higher indirect benefits by as much as $10 \%$. When compared to both public and private sectors, the State contributes significantly more to employees in both medical and retirement benefits.

Total compensation includes benefits of health, dental, life and disability insurance, pharmacy and vision insurance, retirement, deferred compensation, paid leave (annual, sick and holiday), compensatory time off, and all other types of leave.

Health insurance costs make up a significant portion of indirect benefit costs, and are a recruiting incentive for the State. Nationally, employers, including New Mexico, are beginning to more effectively manage benefits to maximize the return on investment to both the organization and to its workforce. As an example, an increasing number of organizations are paying $100 \%$ of coverage for the employee, while requiring employees to pick up a greater portion, if not all, of dependent coverage. Accordingly, the State should continue its efforts to review and manage its healthcare plan design, utilization rates, and to implement cost-management strategies that both mitigate contribution increases, and improve the overall health and wellbeing of employees.

The Public Employee Retirement Association (PERA) offers a defined benefit retirement program for State employees (educational employees participate in a separate plan). Significant changes to PERA plans have recently occurred including modifications to the employer/employee contribution rates, and a movement to an age and service credit requirement (rule of
85) for new employees. Currently, the PERA retirement calculation considers both years of service, and average highest earnings.

It is important that employees be provided with a complete picture of the total value of their compensation package with the State of New Mexico, including both direct and indirect compensation. SPO is working with the Department of Finance and Administration (DFA) and the General Services Department (GSD) to develop within PeopleSoft, a total compensation statement to be provided annually to each employee.

As costs continue to increase for all of the major components of total compensation, the State must continue examining its practices to ensure that it is providing the most effective combination of salary and benefits in order to enhance recruitment while remaining fiscally responsible.

## Compa-Ratios Vary Significantly

Compa-ratio ${ }^{3}$ is a position within a pay range relative to the midpoint of a pay range. It is an industry standard measurement of a compensation plan.

When evaluating individual agencies:

- The average Compa-ratio throughout the state ranges from $90 \%$ to 116\%;

The midpoint or close to it has become

- 8 executive agencies have an average Compa-ratio of less than $100 \%$;
the entry level for new hires. and,
- 14 executive agencies have an average Compa-ratio of over $110 \%$.

This is indicative that in most agencies the midpoint or close to it has become the entry level for new hires. The lack of pay adjustments has resulted in significant Compaction for tenured employees who typically have more experience or qualifications than new hires.

## Implement Variable Pay-for-Performance Reward System

SPO continues to assess the feasibility of introducing variable pay-for-performance models into the classified service compensation system. These types of programs are currently being utilized successfully in other government entities. Employee rewards may include merit increases to base salaries or lump sum rewards and bonuses.

In general, the State's compensation system should align variable pay with achieved results to recognize and reward employees for their contribution to the success of the agency. To be effective, variable pay must accommodate market fluctuations and the cost of living. Variable pay mechanisms are important components of a reward system that provides effective methods for rewarding outstanding performance, for accomplishments of short-term assignments, for retaining employees and for similar special situations.

[^1]
## Classification System Changes

In 2001, the State revised the classification and compensation system resulting in a $27 \%$ reduction in the number of job classifications from 1,200 to 867. This project, known as NM.HR.2001, included:

- Increasing the compensation plan from a $50 \%$ spread to a $78 \%$ spread due to a change in the State's compensation system and strategy that was abandoned shortly after its establishment; and,
- Abolishment of minimum qualifications for each classification.

The implementation and subsequent abandonment of the premises of NM.HR.2001, coupled with the impact of the economic downturn, significantly contributed to the State's inability to attract and retain employees. In 2011, SPO initiated a review of all classifications. This review has resulted in all classifications and job descriptions being scheduled to be modified to address:

- Requisite minimum qualifications for each classification; and,
- A specific description of the job duties and responsibilities related to the duties of the position.

These changes resulted in applicants having a better understanding of the duties of the job, and the qualifications required, resulting in better qualified applicants being hired.

SPO has developed a new market-focused Classification \& Compensation System that will deliver 11 new pay lines that capture different families of work. These pay lines will allow for targeted, well-planned increases to be delivered, easing market tensions and bringing New Mexico closer to the Comparative market.

## System Maintenance Costs

In a joint effort with both the LFC and DFA, a methodology was developed to ensure the cost of a $1 \%$ salary increase for classified and exempt employees for a full year. Cost of In-Range Salary Adjustments for a Full Fiscal Year is based on actual classified and exempt employee salaries, and equates to approximately $\$ 9.6$ million, including benefits. The table below illustrates the cost of General Fund Split for a full fiscal year:

## Table 1

| Cost of In-Range Salary Adjustments for a Full Fiscal Year |  |
| :---: | :---: |
| Percent of Actual Salary | Cost of the General Fund Split |
| Adjustment | (millions) |
| $\mathbf{1 \%}$ | $\$ 5,395.00$ |

## Salary Surveys \& Data Sources

## Annual Salary Survey Purpose

Annually, The State Personnel Office's Compensation \& Classification Division conducts a salary survey to identify and compare the labor market competitiveness of the State's salary structure (pay bands), and current pay practices (actual pay), with the State's comparator market. This survey also allows an assessment of the competitiveness of pay and benefits (insurance, leave, etc.) to the labor market. SPO's Compensation \& Classification Division reviews and analyzes numerous, credible, salary and budget surveys to collect salary data. (See Appendix A).

Job classifications are reviewed and compared to benchmarks to determine how close to similar jobs are represented through Comparative analyses, and are selected based on market criteria which are consistent with past comparisons. These represent a:

- Large sample of state employees;
- Variety of job occupations (clerical, administrative, trade, counseling, law enforcement, etc.); and,
- Range of levels in job complexity (measured in job content points).

Unless noted, data used in the compilation of this report is as of July 1, 2018

## National Compensation Association of State Governments Salary Survey

SPO participates annually in a comprehensive salary survey of benchmark job classifications sponsored by the National Compensation Association of State Governments (NCASG). The NCASG's primary objectives are to improve the validity of job matches, to improve the accuracy of data in salary surveys among the states, and to reduce the number of individual surveys exchanged among the states on an annual basis.

In 2018, 39 state governments participated in NCASG's annual survey, representing 644,246 public sector employees. In 2018, SPO identified job matches for 179 of 189 benchmark classification in the survey.

## Total Compensation

The U.S. Bureau of Labor Statistics defines total compensation as "the complete reward/recognition package for employees, including all forms of money, benefits, perquisites, services and in-kind payments."

The State of New Mexico provides a competitive employee benefit package that includes: Employer-paid medical insurance contributions, pension (retirement) contributions, paid leave allowances for vacation days, sick days, and paid holidays. Additionally, State employees may take advantage of a Section 457, Deferred

Table 2

| Eight - State Comparator Market <br> Total Compensation Ranking |  |
| :--- | :---: |
| Wyoming | $\$ 95,050$ |
| Utah | $\$ 90,915$ |
| Colorado | $\$ 86,148$ |
| Oklahoma | $\$ 86,080$ |
| New Mexico | $\$ 80,010$ |
| Arizona | $\$ 77,638$ |
| Texas | $\$ 68,909$ |
| Kansas | $\$ 63,845$ |
| Nevada | $\$ 57,210$ |

Compensation Plan that allows for contributions to a tax-deferred savings program that can be used to supplement their retirement plan.

Employer-provided employee benefits remain an important part of the total rewards package in attracting and retaining workers. The below graph illustrates the Comparison of total compensation.

## Graph 1

## Total Compensation

## Eight State Comparator Market

When Compared to the eight state Comparator salary market, Table 1 shows that New Mexico ranks sixth. In 2000, the Hay Group reviewed the benefits offered by the State and ranked the benefit package at the median level, or slightly above the average benefit package of the Comparator market. New Mexico participates in an annual total compensation survey, with the results continuing to support this ranking. (See table 6, page 18). Increases to both salary and benefits have resulted in significant growth in total compensation for these states.

## Total Classified Compensation Calculation

Table 3 and Chart 1 provide a typical breakdown of New Mexico's total compensation components for classified employees. The 2018 average base salary is $\$ 45,906$. This amount is $57.1 \%$ of total compensation. The remaining employer sponsored indirect components of total compensation (mandated benefits, insurance, and paid time off) is valued on average at $\$ 34,554$ or $42.9 \%$ of total compensation, resulting in a total compensation annual amount of $\$ 80,459$.

Table 3

| Average Base Salary: |  | $\mathbf{\$ 4 5 , 9 0 6 . 0 0}$ | $\mathbf{5 7 . 1 \%}$ |
| :--- | :--- | ---: | ---: |
| Employer Sponsored Benefits: | $(6.2 \% / 1.45 \%$ of gross salary) |  |  |
| FICA/Medicare | $(16.99 \%$ of gross salary) | $\$ 3,512$ | $4.4 \%$ |
| PERA | $(1.1 \%$ of gross salary) | $\$ 7,799$ | $9.7 \%$ |
| RHC | (120 hours per year) | $\$ 918$ | $1.1 \%$ |
| Vacation | (96 hours per year) | $\$ 2,648$ | $3.3 \%$ |
| Sick | (80 hours per year) | $\$ 2,119$ | $2.6 \%$ |
| Holiday | (less than $\$ 50,000)$ | $\$ 1,766$ | $2.2 \%$ |
| Insurance | (8 hours per year) | $\$ 15,615$ | $19.4 \%$ |
| Personal Day |  | $\$ 177$ | $0.2 \%$ |
| Total Benefits | $\mathbf{\$ 3 3 , 3 5 4}$ | $\mathbf{4 2 . 9 \%}$ |  |
| Total Compensation (Salary + Benefits) |  | $\mathbf{\$ 7 9 , 2 6 0}$ | $\mathbf{1 0 0 . 0 \%}$ |

Chart 1

## Employer Costs for Employee Compensation

A breakdown of total compensation components in New Mexico Compared to national trends for civilian workers, private industry, and state and local government is shown in Table 4. These costs are derived from the National Compensation Survey conducted by the U.S. Bureau of Labor Statistics, and is published in the

Today's workers tend to move between different organizations, and be attracted to portable retirement plans when they leave an organization. monthly Employer Cost for Employee Compensation (ECEC) report. Once average total compensation is derived, the various components can be calculated as a percentage of total compensation. This calculation allows for comparisons to be made between the State of New Mexico and national trends.

Table 4 demonstrates how New Mexico's salaries and benefits compare nationally to other state and local governments and the private sector. In general, the balance between direct compensation (wages and salaries) and indirect compensation (benefits, paid time-off, and retirement) for the State is noticeably different than any of the other three groups. State of New Mexico wages and salaries only account for $57.1 \%$ of total compensation, as compared to approximately $62.4 \%$ for state and local governments nationally.

Although, the State's wages and salaries are less than those nationally, the ratio of the State's indirect compensation (benefits), when compared to base salary, is significantly higher than other state and local governments by $5.3 \%$. This significant indirect compensation difference is a contributing factor in the State's ability to attract and retain qualified employees.

While the survey indicates that the amount of leave (paid time-off) provided by the State is $1.3 \%$ greater than the national civilian worker average, the percentage of insurance (medical, dental, vision, etc.) coverage paid by the State is $10.8 \%$ greater than what civilian workers are provided. Nationally, in both public and private sectors, a trend is occurring to address escalating health insurance premiums by requiring employees to cover a greater percentage of their benefits through increased premium rates, higher co-pays and higher yearly deductibles. These measures pass a greater cost on to the employee, and reduce the cost to the employer. These measures also provide an incentive to employees to better manage their health and wellness issues because the employee bears more of the cost for services.

Table 4

| Compensation Component | Civilian Workers | Private Industry | State \& Local <br> Government | State of New <br> Mexico |
| :--- | :---: | :---: | :---: | :---: |
| Wages and salaries | $68.3 \%$ | $69.6 \%$ | $62.4 \%$ | $57.1 \%$ |
| Benefits | $31.7 \%$ | $30.4 \%$ | $37.6 \%$ | $42.9 \%$ |
| Paid leave | $7.1 \%$ | $7.0 \%$ | $7.5 \%$ | $8.4 \%$ |
| Supplemental pay | $3.3 \%$ | $3.8 \%$ | $1.0 \%$ | $0.0 \%$ |
| Insurance | $8.7 \%$ | $7.9 \%$ | $11.9 \%$ | $20.2 \%$ |
| Health | $8.2 \%$ | $7.5 \%$ | $11.6 \%$ | $19.0 \%$ |
| Retirement and savings | $5.3 \%$ | $3.9 \%$ | $11.5 \%$ |  |
| Defined benefit | $3.3 \%$ | $1.7 \%$ | $10.7 \%$ | $9.7 \%$ |
| Defined contribution | $2.0 \%$ | $2.3 \%$ | $0.8 \%$ | $0.0 \%$ |
| Legally required | $7.3 \%$ | $7.7 \%$ | $5.5 \%$ | $4.4 \%$ |

The retirement and savings component in state and local government is almost three times the national average for civilian workers. Defined benefit programs were increased as a recruitment mechanism in the late 1960's. While defined benefit programs have been phased out in most private sector organizations, they are also beginning to be used less in the public sector. Although deferred earnings are critical to maintaining a comfortable living in later years, a key issue with employer paid retirement is that this liability continues long after an employee has left the organization.

A solid retirement plan is a key factor in attracting employees to work for an organization, and it is an even larger factor in retaining employees; however, due to the changes in workforce demographics, today's workers tend to move between different organizations more often, and tend to be attracted to portable retirement plans when they leave an organization. Although there is no dispute on the importance of retirement and the time value of money, it may be beneficial to review the balance between the various components of total compensation, given the changes in workforce demographics.

## National Trends

Trends in compensation administration are often influenced by economic indicators at the national, regional, and local levels. Gathering and analyzing these multivariate sources provides a framework against which the State's compensation program can be analyzed. This analysis then informs SPO's specific compensation recommendations.

For 2019, organizations across all industries are planning general salary increases of 2.9-3.2\% as reported by national compensation survey sources. (See Table 5).

The Social Security Administration (SSA) annually determines whether to grant beneficiaries a Cost of Living Adjustment (COLA) based on the inflation rate during the third quarter of the year

Table 5

| Industry Related Trends \& Data Sources <br> See Appendix A for Data Sources |  |
| :--- | :--- |
| WorldatWork | $3.2 \%$ |
| WorldatWork Public Administration | $3.0 \%$ |
| Korn Ferry | $3.0 \%$ |
| Mercer | $2.9 \%$ |
| Willis Towers Watson | $3.1 \%$ |
| Aon | $3.1 \%$ |
| The Conference Board | $3.0 \%$ |
| NCASG | $3.0 \%$ |
| Salary.com | $3.0 \%$ |
| Social Security Administration COLA | $2.8 \%$ | compared to the last year a COLA was awarded. Since 2012, social security adjustments have averaged about 1\%; this includes 2016 in which no increase was provided. For 2019, a $2.8 \%$ COLA is planned.

National compensation survey sources indicate that most organizations plan to provide general salary increases of $3.0 \%$ in 2019.

## Comparator States Merit and Structure Adjustment Trends

When closely reviewing our comparator state governments, we can break out specific occupational salary and structure adjustment trends, particularly for professions which the State Personnel Office has developed new classifications and new salary structures. According to the latest NCASG salary survey data presented at its annual conference this fall, states projected
a 3.0\% merit increase for all occupations in FY18; yet the actual average increase from year-to-year was 2.6\%. States reported actual average merit increases for Engineering and Architects at 2.7\%; Security/Corrections at 2.1\%; and IT at 3.0\%. Reporting states are projecting for FY19 salary increases of $2.25 \%$ and structure adjustments (pay bands) of 1.65\%.

## Economic Data

The U.S. Department of Labor (DOL) Bureau of Labor Statistics (BLS) tracks a number of primary economic indicators relevant to compensation and the price of goods and services.

## Employment Cost Index (ECI)

The Employment Cost Index (ECI) is an indicator measured quarterly that tracks changes in compensation costs including wages, salaries and the employer's cost for employee benefits.

## Consumer Price Index-All Urban Consumers (CPI-U)

The Consumer Price Index—All Urban Consumers (CPI-U) is tracked monthly and is a measure of the changing purchasing power of the dollar. The number reflects the average change in the prices paid by urban consumers for a fixed market basket of goods and services. The index is principally used as an

Table 6

| ECI \& CPI <br> Economic Data |  |  |  |

| - ECI (State \& Local Govt.) | 4.4\% | 3.8\% | 3.6\% | 3.4\% | 3.9\% | 4.1\% | 4.3\% | 3.4\% | 2.4\% | 1.7\% | 1.5\% | 1.8\% | 1.7\% | 2.1\% | 2.3\% | 2.3\% | 2.4\% | 2.5\% |
| - CPI-U | 2.6\% | 1.5\% | 2.3\% | 2.5\% | 4.7\% | 2.1\% | 2.8\% | 4.9\% | -1.0\% | 1.1\% | 3.9\% | 2.0\% | 1.2\% | 1.7\% | 0.0\% | 1.1\% | 2.2\% | 2.3\% |

It is useful to compare the national wage data trends against New Mexico's salary increase history to identify patterns and develop recommendations where necessary. Graph 3 compares the history of CPI-U rates (shaded area) and the national wage increases as reported by WorldatWork against the Legislatively Authorized salary increases in New Mexico.

Graph 3 demonstrates that New Mexico has not kept pace when compared to these two wage and economic data points. According to WorldatWork, 2018 represents the seventh year in a row that industry leading compensation industries have reported organizations providing an average $3 \%$ salary increase. The national rate of inflation has also outpaced salary growth in NM for the same period. This means employee wages have fallen significantly behind trends resulting in employees spending more year-over-year for the same basket of goods and services as measured by the CPI-U. Annual state benefit cost increases have compounded this problem.

The State's inability to provide salary increases and adjust salary structures in line with national market indicators is due, in part, to economic and funding challenges. Data show that as funding becomes available, the State will need to be prepared with multi-year strategies to address complex and varied salary structure and wage issues.

## Graph 3

CPI vs Legislative Increase vs WorldatWork

## Regional Trends

Table 7 below illustrates the average classified salary for New Mexico and the eight state Comparator market for the past 10 years. The change from year-to-year should be viewed as a snapshot in time as a macro-indicator and should not be construed to depict how each Comparator state administered actual pay for individual employees. Each year the composition of filled jobs changes slightly depending on agency business needs, available budget, new hires, career progression and separations.
Table 7

| $\mathbf{1 0}$ Year Historical Data State(s) Average Base Salary Comparison |  |  |  |  |  |  |  |  |  |  |

*Arizona's data from 2009-2013 is from NCASG. Arizona did not participate in the NCASG survey for 2014 or 2016; however, their average base salary data were reported from "The State of Arizona Workforce Report". The State of Arizona "Advisory Recommendation" shows the state's compensation adjustments from 2009-2016, and these adjustments create a large jump in the base salary reported.
** Nevada data was estimated from 2009-2012. Normal aging of their data caused an over estimation of annual base salary for 2013 thru 2017 . 2018 is first time Nevada HR has submitted actual data from their 2018 Employee Hand Book.

## New Mexico Trends

The US DOL BLS annually tracks the Employer Costs for Employee Compensation (ECEC), which includes measures of wages, salaries, and benefits across all nonfarm private and state and local government workers. This data provides another benchmark against which to compare New Mexico classified employee salaries. Nationally, as of June 2017, the ECEC reports the average salary for private industry is $\$ 48,152$. The ECEC reports the average salary for state and local government is $\$ 62,650$.

New Mexico's average classified employee salary as of July 2018 is $\$ 45,906$.

The New Mexico Department of Workforce Solutions (NM DWS) Quarterly Census of Employment and Wages for the first quarter

Table 8
Average Annual Wages (not including benefits)

| USDOL ECEC Total Government | $\$ 63,898$ |
| :--- | :--- |
| USDOL ECEC Private Industry | $\$ 49,504$ |
| NM DWS Total Government (Fed, State, Local) | $\$ 50,700$ |
| NM Classified Employees | $\$ 45,302$ |
| NM DWS Private Industry | $\$ 42,536$ | of 2017 (published August 2017) reports private employment wages in NM averaging $\$ 42,172$. Total Government wages across industries (Federal, State and Local) is reported as $\$ 48,412$. Data is sourced from New Mexico Department of Workforce Solutions Quarterly Census of Employment and Wages (First Quarter 2017). (See Table 7) Second Quarter data is not available at the time of the Annual Report publication.

USDOL ECEC, NMDWS and NM Classified Employee salary trends are presented against the Comparator market of the National Compensation Association of State Governments (NCASG) in Graph 4.
Graph 4

## New Mexico Legislatively Authorized Salary Increases

Graph 5 shows the legislatively appropriated salary increases for each of the past 14 fiscal years. The salary increase amounts include general salary increases, as well as any supplemental increases to employees in specific occupationally based classifications for the years that they were provided. Over this time frame, New Mexico has spent over \$134,833,736 in general fund appropriations for annual salary increases. However, a majority of this funding was appropriated prior to FY09. Specific information for each year can be found in Appendix B.

## Base Pay Analysis

## Maintaining External Competitiveness

New Mexico's compensation strategy for at least the last decade has been to "match" the market and be the average payer in the Compared region. In 2018, New Mexico ranked sixth (Table 9) in the eight state comparator market; however, this simple indicator is misleading, and requires a further in-depth analysis to show how New Mexico's ranking Compares to similar benchmark jobs in the Comparator market, based on similar job content, size, complexity, qualifications and working conditions.

Appendix C shows the average classified salary over the past 14 years for New Mexico, as Compared to the average within the eight state Comparator market, and the relationship between the two components for each year. Appendix C must be viewed as a snapshot in time, macro-indicator, and cannot and should not be construed to depict how each Comparator state administers actual pay for individual

Table 9

| Eight - State Comparator Market <br> Base Compensation Ranking |  |
| :--- | ---: |
| Colorado | $\$ 55,187$ |
| Wyoming | $\$ 53,299$ |
| Utah | $\$ 50,980$ |
| Arizona | $\$ 46,901$ |
| New Mexico | $\$ 45,906$ |
| Oklahoma | $\$ 45,459$ |
| Texas | $\$ 44,901$ |
| Nevada | $\$ 40,862$ |
| Kansas | $\$ 37,345$ | employees, because each year the composition of filled jobs changes slightly depending on agency business needs, available budget, new hires, career progression, and separations.

## New Mexico Classified Employee Average \& Median Salary Comparison

44.9\% of New Mexico's classified employees earn between $\$ 20,000$ and
\$40,000 annually.

Average and median classified salaries advanced from 2005 to 2008 and then remained flat from 2008 to 2013. From 2014 to 2018, the both the median and averages classified salaries gradually increased. New Mexico Classified Employee Average Salary rose over $1.1 \%$ in 2018. (See Graph 6). The dollar difference between average and median salaries occurs due to the larger number of employees earning less than the average annual salary of $\$ 47,597$.

The difference between the average and median salaries is further illustrated upon review of the distribution of classified employees by earnings between 2014 and 2018. (See Graph 7). FY18 data reflects that $44.9 \%$ of New Mexico's classified employees earned between $\$ 20,000$ and $\$ 40,000$ annually. Supplemental information may be found in Table 10.

## Proposed Occupationally Based Salary Structures

SPO has assessed the classified service classification and pay system to identify components in need of updates, modifications, or deletion. Currently, the classified service system consists of (7) seven pay lines, 51 pay bands that are less than $74 \%$ wide, and over 1,145 different job classifications. Within these classifications, the size of job - the needed knowledge, skills, problem solving, and accountability - can vary greatly. Through careful analysis, SPO has discerned that this variance will compound over time, as our current and future classifications demand more and more specialization and skill.

In response, SPO is in the process of creating a new classification structure with 11 new pay lines, each targeted towards a particular sector, which take into account the sizes of different jobs and the movement of the market in these sectors. These occupationally based pay lines are:

- Corrections (Completed)
- Information Technology (Completed)
- Engineer, Surveyor, Water Resources, Engineering Tech (Completed)
- Architecture (Completed)
- Healthcare and Healthcare Support(In Progress)
- Attorneys (Completed)
- Public Safety and Security
- Social Services (Completed)
- General Administration
- Scientific
- Trades and Labor

These new pay lines will provide policy makers with the flexibility to assess both economic indicators and agency requests, in a more pointed manner. The new pay lines will also enable policy makers to take appropriate, targeted action, and continue the utilization of the Hay methodology to accurately evaluate jobs without utilizing artificial levels to accommodate market pay differences.

SPO has also identified job classifications that are unused or underutilized. Many of these classifications are being consolidated. This process has been ongoing, and SPO anticipates that it will be completed within the next fiscal year. SPO will rely heavily on agency input and collaboration during the remainder of the project. The last few elements of the project will involve cross walking old job titles to the new job titles, updating the SHARE and NEOGOV systems, and training our client agencies on the use of the new system.

The new framework has organized all jobs in state government by occupation, thereby providing a mechanism to correct the link between classification and compensation as they relate to the market. The new classification framework provides a means by which the evolution and placement of certain classifications can be accommodated in the future without having to reshuffle the entire framework.

Every classification within the classified service will be evaluated by SPO and properly defined. Each classification is categorized into a dedicated job family with defined levels of work. Every job family contains a classification series that fits together within that job family, such as Civil Engineers and Electrical Engineers within the Engineering family. Once all the classification series have been placed into their job families, the families are assigned to an occupationally market based pay line, which allows SPO to responsively adjust to market pressures that could affect certain types of job families, as seen in the example below:

| Occupational Group | GROUP A: Engineers, Surveyors, Water Resources Specialists and Engineering Technicians |
| :--- | :--- | :--- |
| Job Families: | Engineers |
|  | Surveyors |
|  | Water Resources |
|  | Engineering Technicians |

| Job Family: <br> Description | Engineers |
| :--- | :--- |
| Engineers design and supervise the construction of roads, buildings, airports, tunnels, dams, bridges, and water supply and sewage <br> systems. They must consider many factors in the design process from the construction costs and expected lifetime of a project to <br> government regulations and potential environmental hazards such as earthquakes and hurricanes. Major areas of professional <br> focus are structural, water resources, construction, transportation, and geotechnical engineering. |  |
| Levels of Work | This position is an entry level engineering position accountable for verification of accuracy and completion of <br> Engineer <br> submissions based on prescribed templates. The person in this position receives close supervision from a <br> Licensed Professional Engineer. |
| Engineer <br> Intern | This position is the second level of the Engineering Series which performs standard engineering assignments <br> of limited to moderate complexity in a relevant discipline in accordance with accepted agency practices. The <br> person in this position exercises limited judgment on details of work and in application of standard methods <br> for conventional work. Licensed Professional Engineer will provide general review of all aspects of this person's <br> work and provide close supervision on unusual or difficult problems or work assignments. |
| Engineer | This position is the third level of the Engineering Series which performs professional engineering work with <br> both standard and varied assignments of a moderate to complex nature representing a significant portion of a <br> large project or an entire project of moderate complexity in accordance with accepted agency practices. The <br> person in this position independently evaluates, selects, and adapts standard techniques, procedures, and <br> criteria and has a general knowledge of principles and practices of related fields. In addition, the person in this <br> position over time uses advanced techniques in the modification or extension of theories and practices to <br> complete job assignments and may work on a major project or several projects of moderate scope with <br> complex features. |
| Engineer | This position is the highest non-management level of the Engineering Series and is a seasoned senior position <br> which is accountable for complex design and design review in a designated engineering discipline. <br> Independently applies extensive and diversified knowledge of principles and practices in broad areas of <br> assignments and related fields. Plans and coordinates detailed aspects of agency work. Receives general <br> direction on key objectives and when necessary on unconventional problems. |
| Professional II |  |

| Job Family: <br> Description | Engineers |
| :---: | :--- |
| Engineer <br> Manager II | This position is the second level of management in the Engineering Series which focuses on the supervision of <br> subordinate managers and staff. Incumbents at this level have managerial and technical accountability for the <br> overall results of assigned organizational units. Responsible for managing the day to day operations of the <br> assigned agencies bureaus/sections; works in collaboration to coordinate testing processes with agency <br> sections; provides support to agency management, District Offices and functional groups; and actively <br> participates on the agency specific Subcommittee. |
| Engineer This position is the highest level of management in the Engineering Series which focuses on the supervision of <br> subordinate managers and staff and the allocation of resources. Incumbents at this level have considerable <br> managerial and technical accountability for the overall results of assigned organizational units. Supervise and <br> manage engineers and programs that are responsible for the scheduling, development and delivery of assigned <br> design projects for assigned geographic area. |  |

Defining and accurately placing jobs within this framework will minimize salary inequities between jobs across agencies by creating the right number of jobs and compensating them appropriately based on the level of work that the position is responsible for. The new framework also gives decision makers more flexibility in appropriating salary increases when faced with economic instability or resource scarcity by giving them the ability to target occupational pay lines that are in the most need of an adjustment due to the market or increased difficulties in recruiting and retaining incumbents.

In conjunction with all our client agencies, we continue to move this project forward. The resulting system will enhance recruitment, selection, retention, as well as performance appraisals and succession planning throughout State government.

## Average Salary Data by Pay Band

Tables 11a, 11b, 11c, 11d, and 11e show the number of employees in each pay band and the employee average salary and Compa-ratio by pay band. The data show that the average Compa-ratio by pay band in the General Pay Line is generally below midpoint in the lower pay bands and higher in the higher pay bands. Compa-ratios for all other employees in the new occupationally-based pay lines are generally lower. This is a result of implementing pay structures with higher market-based midpoints without providing accompanying salary increases. Although the State Personnel Board approved them, the Attorney and Social Service Salary Schedules were not included here because they hadn't been implemented by the release of this report.

Table 11a

| General Pay Band | Average Salary | Average Compa - Ratio | \# of Employees |
| :---: | :---: | :---: | :---: |
| 25 | $\$ 19,850$ | $96.1 \%$ | 232 |

| AC | - | - | 0 |

## Average Salary Data by Agency

Appendix E illustrates data similar to the section above, grouped by State agency. The average Compa-ratio by agency for classified employees ranges from the New Mexico Corrections Department at 90.1 \% Compa-ratio, to the Architect Examiners Board at $115.9 \%$. The average Compa-ratio for all employees is approximately $101.3 \%$.

## Key Classification Studies that Solved Staffing and Pay Issues

The two major occupational groups and their respective salary schedules that were implemented in FY18 are:

- Property \& Casualty Adjuster I \& Property \& Casualty Adjuster II (Table 12)
- Workers' Compensation Adjuster I \& Workers' Compensation Adjuster (Table 12)

In FY18, the Compensation and Classification Team completed the Property \& Casualty Adjuster I, II and Workers' Compensation Adjuster I, II classification study primarily benefitting the Risk Management Division at the General Services Department. At issue was the highly competitive Adjusters' job market where competition is local and regional, both public and private. Certified and trained Adjusters are in such high demand that salary adjustments occur almost weekly and sign-on bonuses are the industry standard. The State competes with the Universities and local public bodies such as county and city governments in-state, nearby counties in other states as well as tribal governments.

Competition also comes from afar in the form of natural disasters such as hurricanes, tornados, flooding and fires. When disaster strikes in other states, typically after the Federal Government declares a State of Emergency, their governments will call on other states for any available adjusters, who, like utility workers, can make triple time and half in pay. And because the money flowing into those disasters tends to linger for months, even years, many adjusters decide to stay and move their families there. In order to compete, SPO's Classification and Compensation team researched local and regional salary data and recommended market adjusted Alternative Pay Bands to keep our qualified adjusters at Risk Management Division.

Table 12

| Job Classification | Job Code | Pay Band |
| :--- | :---: | :---: |
| Property \& Casualty Adjuster I | C10323 | 70 |
| Property \& Casualty Adjuster II | C10324 | 75 |
| Workers' Compensation Adjuster I | C10321 | 70 |
| Workers' Compensation Adjuster II | C10322 | 75 |

## Salary Structure

In order for an organization, especially a large one, to manage pay efficiently and effectively, it must simplify the administration of pay into a practical system. To accomplish this, organizations use job size to group individual classifications that have approximately the same job size or "worth" into pay bands. SPO uses the Hay Group Guide Chart-Profile Method of Job Evaluation to determine the size of each classification.

A pay range sets the upper and lower bounds of possible compensation for individuals whose jobs fall within a specific pay band. Each pay band in the general classified salary structure is currently $74 \%$ wide - meaning the maximum rate of pay is $74 \%$ greater than the minimum rate of pay. The two new salary structures have pay bands that are $40 \%$ wide for corrections and $67 \%$ wide for Information Technology. Pay bands act as a control device by identifying the lower and upper ranges of pay that the State is willing to pay for a particular job. From an internal consistency perspective, the range of pay reflects the approximate differences in performance or experience that the State wishes to pay for a given level of work.

74\% General Classified Band Width

## Regression Analysis

Regression analysis is a statistical tool that is used in compensation administration to document salary movement and generate pay lines. For New Mexico, the linear regression line that connects the 19 midpoint values of each pay band is described as the "policy" line. The policy line defines what the State is able to pay in order to remain competitive.

Two other linear regression lines commonly used in compensation analysis are the "market" line and the "practice" line. The market line is developed using the average pay rates for each relevant Comparator market job. The practice line represents the average pay of classified employees using actual pay rates. In sum:

- Policy Line = New Mexico Classified Service Midpoints of Current Salary Structure;
- Market Line = Average of Comparator Market Pay Rates; and,
- Practice Line = New Mexico Average of Classified Employee Actual Pay Rates.

Using regression analysis in 2001, SPO implemented a salary structure that was set at 95\% of the eight-state Comparator market. Use of regression analysis continues through FY18 for all New Mexico salary structures, now including separate pay structures for Corrections, Engineering, Architecture, Information Technology, Attorneys and Social Services.

Salary structures must accurately reflect the salary market for many reasons, including recruitment, retention, employee motivation, performance management, employee engagement, and appropriate valuation of job and budget management. An improperly maintained salary structure contributes to staffing problems for the State. For example, in the recruitment area, qualified applicants may not apply for State positions due to low starting pay or low salary ceiling thresholds. Existing highly qualified state employees may see the lack of salary structure movement and lack of wage growth opportunity as a reason to seek employment outside of the State, causing a talent drain.

Graph 8 illustrates the annual salary structure adjustment relative to the national WorldatWork industry indicator. Since 2003, SPO data indicate that the State's structure has increased 13.2\%, while WorldatWork reports participating organizations adjusted their structures by over $32.7 \%$. The six (6) new salary structures are not reflected in this graph, which is based on the general salary structure. This will require a change to how SPO reports structure adjustment figures in the future.

SPO will continue this project to reengineer the compensation and classification structures for all of the State's classifications, but this will take time to completely study, define and implement the remaining structures. When complete, this new system will provide unique salary structures that will allow the State and policy makers to better respond to changing market conditions in individual occupational groups, without having to redesign a single salary structure that affects every State job. The resulting system will allow New Mexico to become more responsive, strategic, and competitive in its compensation practices.

Graph 8

## Classified Employee Compa-Ratio

Below, in Graph 9, the distribution of classified employee Compa-ratios is illustrated. The distribution normally resembles a bell-shaped curve, with several multi-modal spikes, with the number of employees spread fairly evenly throughout the distribution.
Graph 9

Approximately $3.1 \%$ of classified employee's pay rates are over the maximum of the pay band due to base-building salary increases prior to 2010. Although there was no restriction on employee salaries exceeding the maximum of the pay band, action has been taken to ensure that new employees are being hired or compensated within the pay band boundaries. The number of employees whose salary is over the maximum of the pay band has declined from 1,281 employees in FY09, to 526 in FY18.

Graph 10 below illustrates the number of classified employees whose salary was and is above the maximum pay rates of their respective Compa-ratios.

Graph 10

New hire pay rates, on average, were at a $96.1 \%$ Compa-ratio in FY14. In FY18, new hire pay rates increased to a 99.8\% Comparatio. (See Graph 11) Occupationally based salary structures need to be addressed immediately to ensure that pay band midpoints are not being used as the entry level for classified positions. New hires with minimal experience typically should be hired closer to entry level, rather than near the midpoint of the range.

Graph 11

Graph 12

NOTE: Hires represent only new hires and do not include transfers or promotions of state employees

Graph 13

## Alternative Pay Bands (APB)

An APB assignment is used when the current market rate for a classification significantly exceeds the pay band assigned through the job evaluation process. APB assignments are typically utilized due to external market pressures, such as the low supply and high demand of labor (labor shortage). When a qualified labor shortage exists, organizations compete with one other to attract and retain qualified employees. Since the internal value (size of job identified through job evaluation) has not changed, there are no new higher qualifications or more complex duties and responsibilities, so it does not make sense to permanently assign the classification to a different pay band. The solution is to "temporarily" assign the classification to a higher pay band for a limited time until either the market pressures recede, or the actual employee pay catches up to the market rate, and the APB assignment is no longer needed. The implementation of occupationally based salary structures will allow the State to reduce, if not eliminate, the need for APBs in critical occupations.

While APB assignments were intended to be used on a limited basis, it had become the norm, with $32 \%$ of job classifications using them in 2015. With the implementation of the four occupational base salary structures in 2016 and 2017, only $23.8 \%$ of job classifications have APBs. The new pay lines under development are intended to eliminate APBs entirely, once implemented. A complete list of all job classifications assigned to APBs can be found in Appendix F.

## Pay Administration

## Pay Mechanisms

The SPB Rules provide pay mechanisms to enhance recruitment and retention efforts, by providing agencies with the tools to attract and retain a qualified workforce. The various pay mechanisms are explained and listed below:

- Temporary Recruitment Differentials (TREC's) are authorized for positions documented as being critical to the business needs of an agency, and addressing problems for those agencies who have demonstrated recruitment difficulty.
- Temporary Retention Differentials (TRET's) are authorized for positions that have a critical need to retain an employee, and to maintain the business needs of an agency that would otherwise be disrupted if the employee left the position.
- Temporary Salary Increases (TSI's) are used when an employee temporarily accepts and consistently performs additional duties that are the characteristics of a job requiring greater responsibility and accountability, making it a higher valued job. A TSI is a short-term salary measure that may be used until the conditions of the additional duties and responsibilities cease to exist, and may not be extended beyond a one-year period.
- In-Pay Band Salary Adjustments (IPB's) provide agencies the latitude to make recommendations to the State Personnel Director for a base compensation increase up to ten percent (10\%) within a fiscal year to employees whose performance has demonstrated placement at a higher Compa-ratio. This pay mechanism allows flexibility for agencies to provide salary growth within the pay band. DFA reviews the requests to ensure current and future agency budget availability.

Graph 14 shows the activity for each multiple component of pay (MCOP) utilized by the State from FY13 through FY18. The continued decrease in the use of temporary MCOPs (TSI, TREC and TRET) reflects SPO's exercise of oversight, including its evaluation of the improper use of temporary MCOPs, and its continued efforts to ensure that agencies are in compliance with

SPB Rules. Temporary pay mechanisms are reviewed and authorized for various periods of time depending on each individual circumstance, and in accordance with SPB rules.

## Graph 14

In Pay Bands (IPBs) spiked in FY15 because they were specifically authorized for critical positions at CYFD, DOT,DPS, DGF and DCA, based on Compa-ratio and agency budgets. The increase in IPB's in FY18 were granted to healthcare and community services related professionals at DOH and CYFD. These IPBs brought employees closer to new-hire Compa-ratios and corrected internal alignment and appropriate placement issues.

## Classified Service Demographics

The below graphs detail the level of education received, ethnicity, gender and age demographics of classified employees.

## Graph 15

Chart 2

## Graph 16

Graph 17

## County-by-County Population vs. Classified Demographics

In comparing the county averages of age and salary of classified employees, acknowledging that the two metrics are distinct, a few Comparisons stand out. Specifically, in Eddy and Lea counties, traditional oil and gas producing areas, comparative average
classified employee salaries are significantly less than average county salaries; however, salaries within the "oil patch" are traditionally higher than surrounding counties. San Juan County also stands out as a significant petroleum producer, with higher than average salaries for field crews. Higher than average salaries are also attributable to PNM's San Juan Generating Station in the county. Starting salaries for power station employees are typically in the $\$ 60,000$ range. Similarly, classified service salaries have higher difficulty competing against the technology centers located in Sandoval and Los Alamos counties, as those counties are home to Intel and the National Laboratories, respectively.

| County Demographics |  |  |  | State Classified Demographics |  |  | State Classified Comparison |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| County | Population | $\begin{gathered} \text { Median } \\ \text { Age } \\ \hline \end{gathered}$ | Median <br> Salary | FTE | Median Age | Median <br> Salary | \% FTE <br> County | Age Difference | Salary Difference |
| Bernalillo County | 676,773 | 37.7 | \$52,146 | 4,479 | 45.3 | \$42,303 | 0.66\% | 7.6 | -\$9,843 |
| Catron County | 3,587 | 61.0 | \$34,234 | 20 | 44.4 | \$35,562 | 0.56\% | -16.6 | \$1,328 |

## Classified Positions \& Average Salary By County

The map illustrates the number of classified positions and average classified employee salary in each county.

## Classification

The New Mexico State Classification system classifies jobs and the work being performed into occupational categories, in order to enable management to identify and group work functions in alignment with the mission of the agency. The current classification system was transformed in 2001 by the SPB adopting the Standard Occupational Classifications (SOC) system that was introduced by the Federal Office of Personnel Management (OPM) that same year. Currently, SPO is working to restructure the classification system to better identify and align job families into common occupational categories. The two (2) occupational groups created in FY16 were Corrections and Information Technology. Additionally, two (2) more were developed in FY17: Engineer/Surveyor/Water Resources and the Architect occupational groups were created each with their separate salary structures. Placing jobs into similar pay categories with unused or under-utilized classifications are then deleted. Consequently, any misclassified jobs will be addressed. All state workers are classified into one of 984 detailed non-manager occupational roles, or 161 manager classifications, according to the agency's documented utilization of that job.

## Classification Studies

The Classified Service is an occupationally based classification system with the majority of non-manager titles delineated into three levels or roles: Basic, Operational, and Advanced. When there is pay compaction, most, if not all, of the employees wind up at the higher end of the classificatiotabliths, and roles or levels go unused. The appropriate number of levels should be determined by detailed analysis that captures actual utilization and job size. Recent classification studies have yielded a variable number of roles or levels for a number of classifications. When SPO identifies unused or unnecessary classifications within the Classified System, those classifications are recommended for deletion.

## Table 13

|  | Classification Studies Completed FY18 |
| :--- | :---: |
| Property \& Casualty Adjuster I | Workers' Compensation Adjuster I |
| Property \& Casualty Adjuster II | Workers' Compensation Adjuster II |

## Work Plan

SPO has been working to restructure the classification and compensation system to better reflect the common occupational groupings and job families utilized in the classified service, in an effort to create separate occupationally based pay lines. These proposed 12 separate pay lines or salary structures will enable the state to better compete with the external comparator labor market by targeting the salary structure adjustments of individual occupational groups, instead of trying to raise the pay band midpoints of all 1,145 classifications in the state. Each occupationally based pay line will move independently when adjusted, making each line more responsive to the market should monies become available to fund one or more adjustments.

Table 14

| Proposed Classifications for Review | \# Positions | Proposed Classifications for Review | \# Positions |  |  |  |  |
| :--- | :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| Healthcare and Healthcare Support | 1,353 | Museum Study | 226 |  |  |  |  |
| Paralegals, Legal Assistants, Law Clerks | 74 | Generic Manager Classifications | 1,723 |  |  |  |  |
|  |  |  |  |  | Total: |  | $\mathbf{3 , 3 7 6}$ |

## Supervisors

Prior to April 2012, SPO did not classify the function or title of Supervisor. Instead, employees that were assigned supervisory duties were compensated through an additional Supervisory Pay Allowance that was added onto the employee's salary. At the time, the SPB rules allowed for an allowance of up to $20 \%$; however, the methods used to determine how large the allowance would be varied from agency-to-agency. In some agencies, there was a flat percentage, and others made the determination by the number of employees supervised. The intent was that if management determined that an employee receiving the differential was not performing the leadership role adequately, the pay was to be taken away. Another suitable employee could then be assigned the duties and provided the additional pay differential; thus, eliminating the need to go through a costly and time consuming reclassification of the position and employee.

Beginning in April 2012, SPO has implemented 169 new supervisory classifications. All agencies where supervisory positions were identified have transitioned those positions into the new titles. The compensation mechanism known as Supervisory Pay Allowance, that is not a permanent part of the employee's base salary, has now become part of the employee's base pay. This consolidation of pay allows for a more solid organizational structure that clearly identifies supervisors from non-supervisory employees. Additionally, when an employee accepts a transfer or promotion into or out of a supervisor classification, there is no confusion regarding what the employee's base salary will be, or what the responsibilities will be.

## Managers

There are eight (8) core manager job categories, each distinguished in size by four compensable measures:

- Scope and Complexity of Responsibility;
- Types of Employees Managed;
- Financial Accountability; and,
- Strategic Planning/Decision Challenge.

Formerly, manager classifications were developed in the same format as the non-manager classifications, except that they were developed from a lengthy three year study that analyzed all manager positions across levels and agencies. It was eventually determined that there were eight distinct sized manager jobs:

- Line I
- Line II
- Staff
- Administrative Operations I
- Administrative Operations II
- General I
- General II
- Executive

Initially, 14 occupation specific areas of specialization (Table 15) were identified for market pricing purposes:

## Table 15

| Dental | Economics |
| :--- | :--- |
| Engineering | Environmental Science |

| Forensic Science | Hospital Administration |
| :--- | :--- |
| Information Technology | Nutrition/Dietitian |
| Occupational/Physical/Speech-Language | Pharmacy |
| Psychiatry | Nursing |
| Physician | Motor Transportation /Special Investigations |

Currently, there is a solid distinction between the "size" and a correct number of manager levels that cover the full range of management in the classified service; but many times it is difficult to know what work is actually being performed by specific managers based on the generic titles. For example, the generic title of Administrative Operations Manager II may contain an agency's general counsel, chief economist, chief financial officer, county office manager, human resource manager, special projects coordinator, program manager or bureau chiefs over many different functions - all with very different job specific duties, responsibilities, and minimum qualifications.

Beginning in April 2012, SPO introduced and implemented classification specific manager job descriptions that detail the purpose and areas of responsibility with occupational specific titles, and job specific education and experience requirements. The project, with participation by state agency management, is on-going with the final target of classifying approximately 273 generic manager (FTE) positions. As of FY18, ending June 30, 2018, there are currently 161 manager titles in use, with more coming online every quarter.

Although many classification studies have been completed, many more still require attention through FY19. SPO's current classification structure project will determine how the following classifications will be addressed.

## Misclassification \& Classification Creep

Job misclassification and classification creep often occur when wages do not keep pace with the Comparative market, resulting in employees being "artificially" promoted or reclassified into a pay band with higher pay opportunities. Such artificial promotion creates several administrative difficulties, including putting the employee at risk of having to deliver on expectations that they are unqualified to perform. While many employees perform well when taking direction, they may be ineffective at assigning work, evaluating, or disciplining coworkers. Also, managers can experience pay Compaction issues when subordinates are all at the top end of the pay range, with no room for rewarding exceptional job performance. Misclassification creates financial costs, as well. According to estimates by the Hay Group, if $15 \%$ of the classified jobs are misclassified by one pay grade, over time, it could take hundreds of thousands of dollars to correct. In practice, the costs of misclassification are much higher:

| Average Pay |  | Number of Employees |  | Estimated Misclassification |  | Average Midpoint Progression |  | Cost of Misclassification |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \$45,906 | X | 17,017 | X | 15\% | X | 12.05\% | = | \$13,940,859 |

Classification creep often occurs as a result of not properly maintaining classifications. The longer the problem goes unresolved, the more it costs to bring those salaries up to par. Misclassification can have unintended consequences, as well. Specifically, artificially promoting an employee above their level of proficiency can bump them into a higher tax bracket, or a higher health
coverage category, requiring them to pay a higher benefit contribution. Hidden costs to the employer can come in the form of vital services going undelivered by those lower level jobs that are largely unused.

Finally, the upward misclassification of positions throughout many years can demotivate employees and managers when a classification study takes place, resulting in a subsequent downgrade to the proper classification level. For example, the employee typically views such a downward classification as a negative action that they had no control over; ultimately, affecting productivity, job satisfaction, and potentially contributing to higher turnover and vacancy rates.

The solution to address misclassifications and classification creep is for SPO and agencies to work together to ensure that positions are properly classified, and that work units are organized efficiently to support the most streamlined work flows. SPO can work with agencies to perform desk audits and organizational reviews when work units are not organized efficiently. Finally, when classification studies are completed the resulting recommendations should be implemented, as soon as realistically possible.

## Pay for Performance

## Performance-Based Variable Pay Strategy

Variable pay for performance programs are designed to reward individual work contributions and encourage the best performance from employees. Any type of performance-based reward program must first be clearly understandable by both employees and managers. Under such a program, employees have the opportunity to influence how quickly they move within their pay band by demonstrating high levels of job performance. Three basic assumptions form the basis for such a program:

- Some employees perform better, are more productive, and add more value than others;
- Employees who do perform better should receive larger rewards; and
- Larger rewards may be used to incentivize and motivate employees to perform at their best.

A performance-based system is driven by the specific goals jointly established by the employee and the manager at the beginning of the performance period, and documented in the individual performance evaluation form. These performance goals must be realistic, measureable, and achievable by the employee, and communication between the manager and employee about meeting these goals must occur often during the performance year. At the beginning of the evaluation period, the employee and manager should meet to discuss expectations for the coming year, and establish these goals for the employee to achieve, in order to meet or exceed expectations. While individual goals may change during the year due to changing circumstances for the entire organization, such changes should be the basis for new discussions between the manager and employee.

Accomplishing the goals by exceeding expectations results in a larger salary increase than would be available if the goals had not been met. Depending on adequate funding, a variable pay-based performance program can be an integral part of the total compensation reward system. Such a system supports motivation theories, which suggest that incentives do motivate employees to perform at higher levels.

SPO is currently researching the use of variable pay for performance, but recognizes it must first establish an occupationally based salary structure that is more reflective of the Comparator market.

## Leave Accruals and Payouts

## Annual Leave

One of the state's many employee benefits is paid time off. Employees may use accrued leave and be paid for the hours they are absent from work due to vacation or being sick. Sick leave may also be used to care for sick family members.

Classified employees accrue annual leave as outlined in the SPB Rules, based on their tenure. For example, employees with less than three years of service accrue 80 hours of leave per year, while those with over 15 years of service accrue 160 per year. During FY18, State employees used approximately 1.75 million hours. Actual annual leave usage, and costs, from FY12 through FY18 is shown in the following graphs.

Graph 18

Graph 19

When an employee separates from State service, they are eligible to cash out up to 240 hours of annual leave at their current hourly pay rate. Any additional hours over 240 are forfeited at the time of separation, or at the end of each calendar year. In FY18, employees who separated from the classified service cashed out at total of $\$ 180,900$ of annual leave, $\$ 70,000$ more than FY17. The average employee, who separated, cashed out approximately 6.2 days of annual leave.

## Sick Leave

All employees accrue 96 hours of sick leave per year, as per SPB rules. Employees in FY18 used approximately 1.75 million hours of sick leave, as compared to the FY17 level of 1.44 million hours, resulting in an increase of $1.7 \%$, which equates to approximately $\$ 8,600,000$. The sick leave actual usage and cost for FY12 through FY18 are shown on Graphs 22 and 23:

## Graph 22

Graph 23

Employees are eligible to cash out accrued sick leave over 600 hours per fiscal year, either in July or January, at one-half their hourly rate for up to 120 hours of sick leave. At the time of retirement, employees can cash out accrued sick leave over 600 hours at one-half their hourly rate for up to 400 hours of sick leave. In FY18, agencies cashed out a total of 52,600 hours of sick leave for active employees. Employees who were retiring cashed out approximately 4,000 hours. The graphs below show the total hours paid at one half the cost of employee's hourly wage from FY14 through FY18:

$\square$ Sick Leave Buy Back $\quad$ Retiree Sick Leave Buy Back

## Overtime

Agencies are expected to assign work in a responsible manner, so as to avoid the need for overtime. Managers and supervisors typically use existing staff resources to meet work demands; however, there are many times that special projects or emergency situations require employees to work additional hours. Overtime payment is left largely to the discretion of the agencies. Agencies may allow employees to accrue compensatory time in lieu of cash payment. The Fair Labor Standards Act (FLSA) requires that non-exempt employees be compensated for any additional hours worked over 40 in a workweek, at 1.5 times their salary. FLSA Exempt Employees (those not covered by the overtime provisions of FLSA) may be compensated according to agency policy; however, there is no state or federal law that requires these employees to be compensated for any additional hours worked.

There is a correlation between vacancy rates and overtime hours worked. If an agency has a vacant position, someone may be required to do the work that would normally be done for that position by working additional hours, in response to special circumstances. While this may be acceptable in the short term, if it occurs regularly or for extended periods of time, it could be an indicator of other issues in the organization. Additionally, overtime is an unbudgeted liability that is usually paid with vacancy savings, so agencies should strive to minimize the use of overtime.

During FY18, both FLSA non-exempt and FLSA exempt employees were paid over $\$ 30$ million dollars in the form of either a cash payment or compensatory time off. Graphs 26 and 27 below depict a comparison of overtime usage and total dollars paid from FY12 through FY18. FY18's $\$ 30.5 \mathrm{M}$ represents a four-year low for the State and reflects careful management by agencies and improved recruitment and retention in key classifications. SPO and the SPB are concerned with the amount of regular overtime being worked and continue to be committed to working with agencies to better manage this issue.

Graph 26

Graph 27

## Turnover \& Vacancy

## Hiring

SPO is responsible for assisting applicants with applying for jobs within the State's classified service, and ensuring that the qualified applicants are referred to fill vacant positions. Beginning in the second quarter of FY12, SPO implemented a more flexible and responsive applicant tracking system through NEOGOV. This system brought the State back into compliance with the portion of the State Personnel Act that mandates a competitive ranking of applicants. NEOGOV is the applicant tracking system currently being utilized by over 20 states, in addition to many universities, colleges, and thousands of municipal and county governments.

Since the implementation of NEOGOV in November 2011, there have been over 15 million hits reviewing various job postings. Thus, it is clear that the flexibility and responsiveness of NEOGOV has made it easier for applicants to apply for state jobs.

In FY18, as a result of the more straightforward application process (NEOGOV), 187,022 applications were received and processed for 3,795 advertised jobs. These metrics illustrate the dramatic increase in both positions advertised and applications received. In FY18, 2,582 classified new hires were made. Graph 29 shows that in FY18, over $60 \%$ of new hires completed their probationary period.

The implementation of NEOGOV provides agencies with ranked lists of qualified applicants, allowing managers to make hiring decisions from pools of applicants who possess the job related qualifications required to successfully perform the advertised jobs. Additionally, SPO is currently working on developing an onboarding process to assist agencies in better integrating new hires into State government. These two initiatives are expected to positively impact agency efforts in attracting and retaining qualified employees.

*Hires represent all non-promotional hires into state government (excluding internal promotional transfers and temporary hires).

## Separation

In FY18, there were 2,760 total separations. Of the 2,760 separations, $67 \%$, or 1,857 positions were voluntary and only $12 \%$, or 339 positions were involuntary separations. Of the voluntary separations, 562 were related to retirement. There was 2 separations that were related to a Reduction In Force (RIF) in FY18.

Chart 3

Graph 30

Graph 31

## Turnover Rates

High turnover rates affect the State in many ways, including the cost to hire, which involves the labor costs associated with reviewing applications, interviewing candidates, and training new employees. Turnover also costs the State because it causes agencies to have to train current employees to under-fill positions. Under-filling

If the turnover rate were reduced by approximately $50 \%$, this could potentially free up almost \$56 million dollars to use toward salary increases and structure adjustments. positions not only takes a toll on production, but also negatively affects employee morale due to increased workloads and responsibilities, long hours, potential lack of adequate training, potential poor communication, and organizational practices. These potential morale issues can ultimately cause a domino effect of burnt out employees who are eager to find a job with less stress, and an increased work and family life balance.

Table 16

| The Cost of Employee Turnover |  |  |
| :---: | :---: | :---: |
| Separation Cost |  |  |
| Cost of Exit Interviewer's Time | \$33 x 1 hr. | \$33 |
| Cost of terminating employee's time | \$ $33 \times .5 \mathrm{hr}$. | \$17 |
| Cost of administrative functions related to termination | \$ $33 \times 2 \mathrm{hrs}$. | \$66 |
| Separation Pay | \$33 $\times 80 \mathrm{hrs}$. | \$2,640 |
| Vacancy Costs |  |  |
| Cost of additional Overtime | 8hrs x 3 EE @ \$ 33 @ time and a half x 21 wks. | \$24,948 |
| Replacement Costs |  |  |
| Pre-employment administrative expenses | \$ $33 \times 3 \mathrm{hrs}$. | \$99 |
| Cost of attracting applicants (ads, agencies, \& staff time) | 3 hr SPO \& 2 hr. Agency @ \$33 | \$660 |
| Cost to review, select and set up interview w/candidate | $2 \mathrm{EE} \times 4 \mathrm{hrs} \times \$ 33$ | \$264 |
| Cost of entrance interviews | \$33 x 4EE x 2 hr. for 10 interviews | \$2,640 |
| Administrative costs | $1 \mathrm{hr} \times 5 \mathrm{EE} \times \$ 33$ | \$165 |
| Post- employment information gathering \& dissemination costs | $8 \mathrm{hrs.x} \$ 33 \times 2$ | \$528 |
| Training Costs |  |  |
| On boarding | $40 \mathrm{hrs.x} 2 \mathrm{EE}$ @ \$33 | \$2,640 |
| + Training costs (OJT, mentoring, etc.) | $120 \mathrm{hrs.x} 2 \mathrm{EE}$ @ 33 | \$7,920 |
| Total |  | \$42,620 |

Turnover costs can be significant when calculating the average cost of turnover per position, factoring in the number of separations in State agencies.

In FY18, there were 2,760 separations in the classified service. At an average cost of \$42,620 per employee, the total cost of turnover in FY18 was estimated to be over \$117,631,200.

Improvements in the recruitment and selection system will improve an agency's ability to hire and retain high performing and engaged employees. There will always be turnover; however, if the turnover rate was reduced by even $10 \%$, the state could save over \$12 million in costs.

## SPO's Online Presence

In July 2014, SPO redesigned and modernized its agency website. The website design incorporates new design trends inspired by larger corporations that service customers of all generations and skill sets. A detailed instructions page was added to the Career Services division page, which allows applicants to follow a step-by-step process explaining the documentation needed to apply for a State job, what happens after an application is submitted, how applicants are ranked, how to check applications status, and other helpful resources.

The new website also includes access to register for trainings, information on every division within SPO, and dedicated space to update users of any office closures. In FY18, the total number of page views the SPO website received was $1,115,025$ and $6,573,784$ to all SPO related pages.

#### Abstract

WorldatWork is a nonprofit human resources association focused on compensation, benefits, work-life effectiveness and total rewards. WorldatWork has more than 70,000 members and subscribers worldwide. Their Salary Budget Survey is the \#1 source in the industry, as well as the longest and largest survey of its kind. WorldatWork projects an average salary increase of three and two-tenths percent (3.2\%) across all US industries for 2019 and a three percent increase for the public administration sector (3.0\%).

Supporting data may be found at www.worldatwork.org. Korn Ferry is a global management and consulting firm providing a range of HR services to companies in 110 countries. They are a leading provider of compensation data, strategy and services across all major industries and employment sectors. For 2019, Korn Ferry projects a three percent (3.0\%) average base salary increase across all industries.

Supporting data may be found at www.kornferry.com

Mercer is a global human resources consulting firm providing services from strategy to implementation. Mercer is a leading provider of compensation and benefits information created from one of the largest warehouses of employer-reported data, with benchmark data representing 17 million employees from over 6,000 organizations. Mercer projects an average increase in base pay of two and nine-tenths percent (2.9\%) across all industries for 2019.

Supporting data may be found at www.imercer.com.
Willis Towers Watson is a global advisory, broking and solutions company with over 40,000 employees in more than 140 countries. The Willis Towers Watson General Industry Salary Budget Survey shows employers planning a three and one tenths percent (3.1\%) salary increase across all industries for 2019.

Supporting data may be found at www.willistowerswatson.com.
The Aon U.S. Salary Increase Survey of 1,062 U.S. companies indicates that organizations plan on providing a three and one tenths percent (3.1\%) salary increase across all industries for 2019.

Supporting data may be found at www.aon.com.
The Conference Board is a global, independent business membership and research association working in the public interest to provide an objective, independent source of economic and business knowledge. The Conference Board projects an average salary budget increase of three percent (3.0\%) across all U.S. industries for 2019.

Supporting data may be found at www.conference-board.org.
Salary.com is the leading SaaS provider of cloud-based compensation market data and analytics. Founded in 1999, the Company serves approximately 4,000 business-to-business customers worldwide with its market-leading CompAnalyst platform. Salary.com projects an average increase in base pay of three percent (3.0\%) across all industries for 2019.
