

IT NETWORK OPERATIONS

General Summary

Responsible for managing the development, documentation, maintenance and security of internal and external network systems, including design, configuration, installation, administration, optimization, and integration. Responsible for data protection and integrity.

IT Network Administrator I

Jobcode: INEA20

Pay Band: ID

FLSA Status: Non-Exempt

Distinguishing Characteristics

Under direct supervision, provide network administration and maintenance of hardware and software. Support the network environments of computer technologies, including voice, data, and/or video/image technologies.

Recommended Education and Experience for Full Performance

Bachelor's degree in Computer Science, Management Information Systems (MIS), Information Technology, Engineering or similar technical degree and two (2) years of experience in end user support, systems administration or network administration. Any combination of education from an accredited college or university in a related field and/or direct experience in this occupation totaling six (6) years may substitute for the required education and experience.

Minimum Qualifications

Associate's Degree in Computer Science, Management Information Systems (MIS), Information Technology, Engineering or similar technical degree and two (2) years of experience in end user support, systems administration or network administration. Any combination of education from an accredited college or university in a related field and/or direct experience in this occupation totaling four (4) years may substitute for the required education and experience.

Essential Duties and Responsibilities*

1. Participate in the design, documentation, and implementation of new and/or improved network systems.
2. Monitor and report on network utilization and escalate issues to higher level network support.
3. Respond to trouble calls; diagnose and develop solutions/repair.
4. Participate in troubleshooting and maintaining the security of the network infrastructure.
5. Participate in patching and performing routine maintenance of network devices.
6. Apply oral and written communication skills to communicate complex technical issues to non-technical users.
7. Establish and maintain an effective working relationship with customers and technical staff.
8. Apply knowledge of network technologies and standards.

IT Network Administrator II

Jobcode: INEA23

Pay Band: IE

FLSA Status: Exempt

Distinguishing Characteristics

Under general direction, network administration and maintenance of hardware and software. Manage network projects and support the network environments of computer technologies, including voice, data, and/or video/image technologies.

Recommended Education and Experience for Full Performance

Bachelor's degree in Computer Science, Management Information Systems (MIS), Information Technology, Engineering or similar technical degree and four (4) years of experience in network administration. Any combination of education from an accredited college or university in a related field and/or direct experience in this occupation totaling eight (8) years may substitute for the required education and experience.

Minimum Qualifications

Bachelor's degree in Computer Science, Management Information Systems (MIS), Information Technology, Engineering or similar technical degree and two (2) years of experience in network administration. Any combination of education from an accredited college or university in a related field and/or direct experience in this occupation totaling six (6) years may substitute for the required education and experience.

Essential Duties and Responsibilities*

1. Assist in the design, documentation, and implementation of new and/or improved network systems.
2. Monitor and report on network utilization and escalate issues to higher level network support.
3. Respond to escalated trouble calls; diagnose and develop solutions/repair.
4. Troubleshoot and maintain the security of the network infrastructure.
5. Patch and perform routine maintenance of network devices.
6. Apply oral and written communication skills to communicate complex technical issues to non-technical users.
7. Ability to establish and maintain an effective working relationship with customers and technical staff.
8. Maintain knowledge of network technologies and standards.
9. Implement the network configuration, and may oversee installation and implementation of the network.
10. Ability to read technical documents, maintain accurate records, and prioritize work.
11. Makes recommendations for changes and may implement agreed upon enhancements.
12. Maintains and validates back-ups of network configuration.
13. May provide technical leadership to first-level staff.

IT Network Administrator III

Jobcode: INEA26

Pay Band: IF

FLSA Status: Exempt

Distinguishing Characteristics

Provide network design, hardware and software support. Manage network projects and support the network environments of computer technologies, including voice, data, and/or video/image technologies. Serves as project lead.

Recommended Education and Experience for Full Performance

Bachelor's degree in Computer Science, Management Information Systems (MIS), Information Technology, Engineering or similar technical degree and six (6) years of experience in network administration and design. Any combination of education from an accredited college or university in a related field and/or direct experience in this occupation totaling ten (10) years may substitute for the required education and experience.

Minimum Qualifications

Bachelor's degree in Computer Science, Management Information Systems (MIS), Information Technology, Engineering or similar technical degree and four (4) years of experience in network administration and design. Any combination of education from an accredited college or university in a related field and/or direct experience in this occupation totaling eight (8) years may substitute for the required education and experience.

Essential Duties and Responsibilities*

1. Manage large/complex network installations including requesting information, evaluating proposals, recommending solutions, overseeing work of others, verifying correct installation, and coordinating with other departments in a highly complex, multi-vendor, and multi-protocol network environment.
2. Plan, design, maintain, and implement network architecture, access, security, and services. Recommend guidelines and policies as appropriate.
3. Initiate network projects including developing and documenting technical network designs and project plans and procuring equipment and supplies.
4. Monitor network for stability and proper configuration.
5. Develop products internally in accordance with requirements of performance, suitability, maintainability, cost, interoperability, flexibility, and conformance to standards.
6. Provide support to other consultants in area of technical expertise.
7. Provide leadership and training to lower level network specialists.
8. Act as final escalation point for network systems.
9. Identify chronic network problems. Perform root cause analysis and develop resolutions.
10. Investigate, evaluate and test new equipment and research new technologies for potential deployment.
11. Maintain the security of the network infrastructure and recommend network improvements.
12. Apply communication skills and ability to influence, persuade, and negotiate.
13. Apply knowledge of multiple network protocols and technologies.
14. Integrate advanced technologies developed in other departments into the agency network environment.
15. Lead technical project teams to ensure timely completion and satisfaction of reliability and performance requirements.
16. Formulate long-term network plans.
